

Paul Waite Boosts Architectural And Engineering Expertise

Skipton-based consulting engineers and architects, Paul Waite Associates – whose client portfolio includes Toyota and the Driver Vehicle Licensing Agency (DVLA) – is accelerating business growth with a hat trick of appointments.

The 14-strong company is further boosting its expertise in delivering complex engineering schemes with civil and structural engineers Chris Sharpe, Dave Topping and Paul McDonald – all of whom were previously employed by a large Harrogate practice.

As associate director of engineering, Chris – an expert in dealing with complex engineering projects who has also carried out extensive work on major historical buildings – will manage the civil and structural engineering divisions. Dave, an associate structural engineer, will head up the structures team in which Paul, a graduate engineer with a master's degree in Architectural Engineering, is based.

Practice commissions include designing the buildings and infrastructure for a new European plant for Toyota, which houses 500 employees. The team has also converted over 35,000 square feet of redundant farm buildings into modern office units at Harewood and designed the infrastructure for the 18-acre Crossings Business Park in Crosshills.
